

PROCITEC GmbH is one of the leading German software companies in the area of telecommunications and information technologies in the technology region of Baden-Württemberg. We are an independent member of a high-performance global network that is composed of small- and medium-sized high-tech enterprises. As a specialist in signal processing, we develop innovative, high-quality system solutions and software products that collect and process analogue and digital radio signals.

We are currently recruiting an experienced engineer to join our expanding Customer Service Team:

Integration Engineer (m/f)

Your challenging position:

- You will integrate our systems and projects as well as shepherd them all the way to the point of customer acceptance. You will learn the ins and outs of our software and become an expert in its installation and maintenance. Customers will turn directly to you when problems arise. You will assist them or coordinate the second-level support we provide to them. You will maintain an overview of customer configuration and manage obsolescence.
- You will be part of a four-member team. Your colleagues will help you to learn the ropes, but will also have not qualms about tossing you into the deep end.
- We have fun at work. Our aim is to do a good job and stay on schedule.
- We work in accordance with processes (including ISO-9001:2015) and continuously refine them.

Your job-winning profile:

- A university degree in telecommunications, electrical engineering, physics, computer science or similar qualification
- Ideally, you should also have a good feel for the following areas: **Linux**, Windows / shell-scripting / **network technology** (LAN, Multicast) / virtualisation with KVM (we use Proxmox) / IT **hardware** like servers, storage, desktops, 19" racks, etc. / **kickstart** with things like CentOS (if you have no idea what this is, **ask us** during the job interview) / basic knowledge of C++, Java, Python / you can set up servers in 19" racks. And you really do not feel content until everything has been installed and every cable **labelled**. And the idea of not **documenting** it all is simply alien to you.
- Soft skills: When it comes to the Nerd Venn Diagram, you see yourself on the lower left or in the middle.
- Very good German and good English skills, both written and spoken

Your compensation:

- Fair pay (or translated into HR-speak: a performance-based salary, attractive benefits and a flexible work schedule)
- Training period, a variety-filled position and the opportunity to work on your own
- A permanent position at a company with an extraordinary positive work atmosphere
- A small, family-like company within a larger business group
- Other companies offer free beverages and fruit – we consider them to be a given

Seize this opportunity and show us what you can do!

We look forward to receiving your detailed application documents, which should include your earliest-possible starting date. Please send your documents to our HR Department by email (personal@procitec.de) or the postal service.
